PROFILE

Full-stack engineer who ships AI products to production: a part-time developer at Landly, the builder of a WhatsApp AI agent and a case-management CRM that run a law firm's client intake every day, and co-founder of a math platform built on 100K+ machine-verified exercises. Strong in TypeScript, React / Next.js and Node.js, with hands-on LLM engineering — tool-calling agents, structured outputs, guardrails and automatic verification. Third-year CS student at HIT and Shayetet 13 veteran.

TECHNICAL SKILLS

Languages	TypeScript, JavaScript, Python, SQL, C++, Java
Frontend	React, Next.js (App Router, Server Components, Server Actions), Astro, Tailwind CSS, Electron, PWA
Backend & Data	Node.js, Express, REST APIs, webhooks, PostgreSQL, Supabase, SQLite, Cloudflare D1
AI / LLM	Claude, Gemini and OpenAI-compatible APIs, tool-calling agents, structured outputs, prompt caching
Automation & DevOps	n8n, Make, Pipedrive API, Git, GitHub Actions, Docker, Vercel, Cloudflare Workers, Terraform, AWS

EXPERIENCE

Full-Stack Developer (part-time) — Landly — Sep 2026 – Present

Real-estate investment platform · Next.js, TypeScript, Supabase (PostgreSQL), n8n, Pipedrive

- Built a consent-gated visitor-intent pipeline end to end — Next.js event capture, least-privilege Postgres storage with retention, and an n8n consumer that scores leads into Pipedrive — verified end to end on staging.
- Merged 20 PRs in my first 4 weeks under code review, validated in a containerized CI replica (258/258 tests passing).
- Audited the WhatsApp-to-CRM lead intake: only 7 of 83 bot leads were stored correctly. Fixed the root causes, backfilled safely (7 → 26 correct records, zero messages sent) and cut ~2,800 automation runs a month (~29% of the Make quota).

Freelance Full-Stack Developer — Hadar Elimelech Law Office — Feb 2026 – Present

Sole developer of the firm's client-intake and case-management systems, all in daily use.

WhatsApp AI Customer-Service Bot (in production) · Node.js, Express, WhatsApp Cloud API, Gemini / Claude

- Designed it to answer clients 24/7 from an approved Hebrew knowledge base and hand off to the lawyer with the full transcript via tool calling; multi-provider LLM fallback.
- Automated the lead flow end to end — first-touch templates to new Meta, TikTok and website leads, no-reply nudges, analytics — hardened with HMAC signature checks, de-dup, rate limits and auto-escalation, so no lead is lost.

Insolvency Case-Management CRM · Electron, React, TypeScript, SQLite, Supabase

- Built a desktop CRM for a debt-relief practice — clients, debts, assets, payments, case pipeline, tasks, calendar and reports — offline-first for sensitive legal data, with auto-backup, multi-PC sync and a one-click Windows installer.
- Shipped a cloud web edition (React, Supabase, Google Drive) and the firm's website (Next.js, Cloudflare Workers).

Mathematics Tutor — Tach In private school & independent — 2021 – Present

- 5 years of teaching (3 on staff); run my tutoring business on a PWA I built — scheduling, push reminders, payments, income.

PROJECTS

MathGen — Co-founder & Lead Developer · Astro, TypeScript, Cloudflare Workers + D1, Python, SymPy, Claude Code — 2026

- Built a worksheet generator for Israeli math teachers on a bank of 101,720 AI-generated exercises — SymPy verifies every answer and a person approves every batch before it merges.
- Authored 178 of 258 merged PRs (69%); built the Claude Code skill that writes a batch, runs the checks and opens the PR.

JobPilot — Autonomous Job-Search Agent · TypeScript, Node.js, Next.js, Supabase, Claude API, GitHub Actions — 2026

- Scans 4 job sources every 2 hours, dedupes into Postgres and scores each posting against my CV with Claude structured outputs (LLM-as-judge); Telegram alerts at score ≥ 70, plus ghost-job and freshness detection.
- Built a Next.js dashboard with application tracking, honesty-guarded CV tailoring and a mock-interview agent; 18 tests.

More: CI/CD security pipeline — Terraform on AWS, Jenkins as code, gitleaks + Trivy gates that caught 2 real findings.

EDUCATION

B.Sc. Computer Science — Holon Institute of Technology (HIT) — Jan 2024 – Oct 2027 (expected)

Coursework: Data Structures & Algorithms, Object-Oriented Programming, Databases, Operating Systems

MILITARY SERVICE

Israeli Navy — Shayetet 13 (Naval Special Forces) — Feb 2018 – Oct 2020

Combat-support role in an elite unit: high-stakes operations, accountability and teamwork under pressure.

LANGUAGES

Hebrew (native) · English (professional working proficiency)
